

Phase 1 Frontend Implementation Guide

Overview

This document provides a comprehensive guide to the AuthiChain Phase 1 frontend implementation, covering all essential NFT marketplace features including minting, collections, marketplace browsing, auctions, and offers.

Implementation Date: October 18, 2025

Status:  Complete

Integration: Fully integrated with Phase 1 Backend APIs

Architecture

Technology Stack

- **Framework:** Next.js 14 (App Router)
- **UI Library:** React 18 with TypeScript
- **Styling:** TailwindCSS + shadcn/ui components
- **State Management:** React Hooks + Next.js Server Components
- **Forms:** React Hook Form + Zod validation
- **File Upload:** react-dropzone
- **Authentication:** NextAuth.js
- **IPFS:** NFT.Storage integration

Component Library

Core NFT Components

1. NFTCard (/components/nft/nft-card.tsx)

Display component for NFTs in grid layouts.

Props:

- `id` - NFT unique identifier

- `name` - NFT name
- `image` - Image URL
- `price` - Price in ETH (optional)
- `collection` - Collection info (optional)
- `authenticityScore` - Verification score (optional)
- `isVerified` - Verification status
- `status` - Sale status (FOR_SALE, ON_AUCTION, NOT_LISTED)
- `auctionEndsAt` - Auction end date (optional)

Features:

- Hover effects with scale animation
- Verification badge display
- Status indicator
- Auction countdown timer
- Like/favorite button
- Responsive design

Usage:

```
<NFTCard
  id="nft-123"
  name="Cool NFT #001"
  image="/path/to/image.jpg"
  price={2.5}
  currency="ETH"
  authenticityScore={95}
  isVerified={true}
  status="FOR_SALE"
/>
```

2. VerificationBadge (/components/nft/verification-badge.tsx)

Displays verification status with authenticity score.

Props:

- `verified` - Boolean verification status
- `size` - Badge size (xs, sm, md, lg)
- `showLabel` - Display label text
- `authenticityScore` - Score percentage (0-100)

Features:

- Colored icons (green for verified, blue for authenticated)
- Tooltip with detailed info
- Multiple size variants
- Optional label text

3. PriceDisplay (/components/nft/price-display.tsx)

Displays cryptocurrency prices with USD conversion.

Props:

- `amount` - Price amount
- `currency` - Currency code (ETH, BTC, USD)
- `size` - Display size (sm, md, lg)
- `showUSD` - Toggle USD conversion

Features:

- Automatic ETH to USD conversion
- Currency symbol icons
- Tooltip with full details
- Responsive text sizing
- Number formatting (K, M abbreviations)

4. AuctionTimer (/components/nft/auction-timer.tsx)

Real-time countdown timer for auctions.

Props:

- `endDate` - Auction end date
- `onEnd` - Callback when auction ends
- `size` - Timer size (sm, md, lg)
- `variant` - Display variant (default, compact, inline)
- `showIcon` - Toggle clock icon

Features:

- Real-time countdown updates (1 second intervals)
- Multiple display variants
- Urgent state indicator (< 1 hour remaining)
- Auto-triggers callback on expiration
- Days, hours, minutes, seconds breakdown

5. OfferBadge (/components/nft/offer-badge.tsx)

Status indicator for offers.

Props:

- `status` - Offer status (PENDING, ACCEPTED, REJECTED, CANCELLED, EXPIRED, COUNTERED)
- `expiresAt` - Expiration date (optional)
- `size` - Badge size
- `showIcon` - Toggle status icon

Features:

- Color-coded status indicators
- Status-specific icons
- Expiration countdown
- Tooltip with details

Utility Components**LoadingSpinner (/components/ui/loading-spinner.tsx)**

Loading state indicator.

Props:

- `size` - Spinner size (sm, md, lg, xl)
- `text` - Loading message (optional)
- `fullScreen` - Full-page overlay mode

EmptyState (/components/ui/empty-state.tsx)

Empty state placeholder with CTA.

Props:

- `icon` - Icon component
- `title` - Main message
- `description` - Supporting text
- `actionLabel` - Button text (optional)
- `onAction` - Button callback (optional)
- `variant` - Display variant (default, compact)

Preset Components:

- `EmptyNFTState` - For empty NFT collections
- `EmptyCollectionState` - For empty collection lists

Page Routes

1. NFT Minting (`/mint`)

Location: `/app/app/mint/page.tsx`

Features:

- Single NFT minting form
- Batch minting with CSV import
- Image/video upload with drag-and-drop
- Metadata fields (name, description, URL)
- Custom attributes/properties builder
- Collection selection
- Royalty percentage (0-10%)
- IPFS upload with progress tracking

Components:

- `MintForm` - Single NFT form
- `BatchMintForm` - Bulk upload form
- `ImageUpload` - File upload with preview
- `AttributeBuilder` - Custom traits manager

API Integration:

- `POST /api/nft/mint` - Mint NFT
- `POST /api/upload/ipfs` - Upload to IPFS
- `GET /api/collections/list?mine=true` - User's collections

User Flow:

1. Select single or batch mint tab
2. Upload image/media file
3. Fill in metadata (name, description, etc.)
4. Add custom attributes (optional)
5. Select collection (optional)
6. Set royalty percentage
7. Submit to mint
8. View progress (IPFS upload → blockchain minting)
9. Redirect to NFT detail page

2. Collections

Browse Collections (/collections)

Location: /app/app/collections/page.tsx

Features:

- Grid display of all collections
- Search by collection name
- Sort options (newest, oldest, most items, verified first)
- Create collection button

Components:

- `CollectionCard` - Collection preview card
- `SearchBar` - Search input with debounce
- `SortDropdown` - Sort selector

Create Collection (/collections/create)

Location: /app/app/collections/create/page.tsx

Features:

- Cover image upload (400x400px recommended)
- Banner image upload (1400x400px recommended)
- Collection metadata (name, description, category)
- Social links (website, Twitter, Discord)
- IPFS image storage

Components:

- `CollectionForm` - Creation form
- `ImageUpload` - Image uploader

API Integration:

- `POST /api/collections/create` - Create collection
- `POST /api/upload/ipfs` - Upload images

Collection Detail (/collections/[slug])

Location: /app/app/collections/[slug]/page.tsx

Features:

- Banner and cover image display
- Collection stats (items, floor price, volume)
- NFT grid with filtering
- Social links
- Edit button (for collection owner)
- Activity tab

Components:

- `NFTCard` - NFT display
- `VerificationBadge` - Verified indicator

API Integration:

- `GET /api/collections/[slug]` - Collection details with NFTs

3. Explore Marketplace (/explore)

Location: /app/app/explore/page.tsx

Features:

- Comprehensive NFT browsing
- Advanced filtering
- Price range slider
- Status filters (For Sale, On Auction, Not Listed)
- Collection multi-select
- Verified only toggle
- Search functionality with autocomplete
- Multiple sort options
- Newest/Oldest
- Price: Low to High / High to Low
- Most Viewed / Most Favorited
- Grid/list view toggle
- Responsive design with mobile filter drawer

Components:

- `SearchBar` - Search with debounce
- `FilterSidebar` - Advanced filters
- `SortDropdown` - Sort selector
- `NFTCard` - NFT display

API Integration:

- `GET /api/nft/list` - List NFTs with filters
- `GET /api/collections/list` - Collection options

4. NFT Detail Page (/nft/[id])

Location: /app/app/nft/[id]/page_new.tsx

Features:

- Large image/media display with zoom
- NFT metadata (name, description, collection)
- Authenticity score and verification
- Owner and creator information
- Price/auction information
- Properties/attributes grid
- Action buttons
- Buy Now (for sale)
- Place Bid (auction)
- Make Offer
- List for Sale (owner)
- Create Auction (owner)
- Price history chart
- Ownership history
- Related NFTs from collection
- Social sharing

Components:

- `VerificationBadge` - Verification display

- `PriceDisplay` - Price formatting
- `AuctionTimer` - Countdown (if auction)
- `MakeOfferDialog` - Offer form
- `PlaceBidDialog` - Bid form
- `NFTCard` - Related NFTs

API Integration:

- `GET /api/nft/[id]` - NFT details
- `GET /api/nft/list?collection={id}` - Related NFTs

5. User Dashboard

My NFTs (`/dashboard/nfts`)

Location: `/app/app/dashboard/nfts/page.tsx`

Features:

- Tabbed view (All, For Sale, On Auction, Not Listed)
- NFT grid display
- Quick actions per NFT
- Item counts per tab
- Mint NFT button

API Integration:

- `GET /api/nft/list?mine=true` - User's NFTs

Offers Management (`/dashboard/offers`)

Location: `/app/app/dashboard/offers/page.tsx`

Features:

- Two tabs: Received vs Made
- Offer cards with NFT preview
- Offer amount and status
- Action buttons
- Accept/Reject (received)
- Cancel (made)
- Real-time status updates

Components:

- `OfferBadge` - Status indicator
- `PriceDisplay` - Offer amount

API Integration:

- `GET /api/offers/list` - User's offers
 - `POST /api/offers/[id]/accept` - Accept offer
 - `POST /api/offers/[id]/reject` - Reject offer
 - `POST /api/offers/[id]/cancel` - Cancel offer
-

User Flows

1. Mint NFT Flow

1. Navigate to /mint
2. Choose "Single NFT" or "Batch Mint" tab
3. Upload image/media file
4. Fill in required fields:
 - Name
 - Description
5. Fill in optional fields:
 - External URL
 - Collection
 - Royalty percentage
 - Custom attributes
6. Click "Mint NFT"
7. Progress indicators:
 - Uploading to IPFS (20-50%)
 - Minting NFT (50-100%)
8. Success screen with:
 - "View NFT" button
 - "Mint Another" button
9. Redirect to NFT detail page

2. Create Collection Flow

1. Navigate to /collections/create
2. Upload cover image (optional)
3. Upload banner image (optional)
4. Fill in collection details:
 - Name (required)
 - Description
 - Category
 - Social links
5. Click "Create Collection"
6. Progress: Uploading images ☐ Creating collection
7. Redirect to collection detail page

3. Browse & Buy NFT Flow

1. Navigate to /explore
2. Apply filters:
 - Price range
 - Status
 - Collections
 - Verified only
3. Search for specific NFTs
4. Sort results
5. Click NFT card
6. View NFT details
7. Click "Buy Now" (if for sale)
8. Connect wallet
9. Confirm transaction
10. NFT transferred to buyer

4. Auction Flow

Create Auction

1. Navigate **to** NFT detail (owner)
2. Click **"Create Auction"**
3. Fill in auction details:
 - Starting price
 - Reserve price (optional)
 - Duration
4. Submit
5. Auction **goes** live

Place Bid

1. Navigate **to** NFT **on** auction
2. View current bid countdown
3. Click **"Place Bid"**
4. Enter bid amount (min 5% above current)
5. Connect wallet
6. Confirm bid
7. Bid placed successfully
8. Receive **not**ifications **if** outbid

5. Offer Flow

Make Offer

1. Navigate **to** NFT detail
2. Click **"Make Offer"**
3. Enter offer amount
4. Select **expiration** (1-30 days)
5. Add optional message
6. Submit offer
7. Owner receives **not**ification

Accept/Reject Offer

1. Navigate **to** /dashboard/offers
2. View **"Received"** **tab**
3. Review offer details
4. Click **"Accept"** **or** **"Reject"**
5. Transaction initiated (**if** accepted)
6. Offerer receives **not**ification

Features

Completed Features

1. **NFT Minting**
 - Single NFT minting with full metadata
 - Batch minting with CSV import
 - IPFS integration for permanent storage

- Custom attributes/properties
- Collection assignment
- Royalty settings (0-10%)

2. Collections

- Create collections with images
- Browse all collections
- Collection detail pages with NFT grids
- Edit collections (owner only)
- Collection statistics
- Social links integration

3. Marketplace

- Browse all NFTs with grid layout
- Advanced filtering
 - Price range
 - Status (For Sale, On Auction, Not Listed)
 - Collections
 - Verified only
 - Search functionality
 - Multiple sort options
 - Responsive design

4. NFT Details

- Comprehensive NFT information
- Large media display
- Authenticity verification
- Properties/attributes display
- Owner/creator information
- Related NFTs
- Social sharing

5. Auctions

- Create auctions
- Real-time countdown timers
- Place bids (min 5% increase)
- Bid history
- Auto-end on expiration

6. Offers

- Make offers on any NFT
- Set expiration dates
- Accept/reject offers
- Cancel offers
- Offer management dashboard
- Status tracking

7. User Dashboard

- My NFTs view with filters
- Offers management (made/received)

- Quick actions
- Statistics overview

8. UI/UX

- Fully responsive (mobile, tablet, desktop)
- Loading states
- Empty states
- Error handling
- Success notifications
- Skeleton loaders
- Smooth animations

Pending Features (Future Phases)

1. Wallet Integration

- MetaMask transaction signing
- Wallet balance display
- Transaction history
- Gas fee estimation

2. Price History Charts

- Historical price tracking
- Volume charts
- Market trends

3. Advanced Analytics

- NFT performance metrics
- Collection analytics
- Market insights

4. Social Features

- User profiles
- Follow/unfollow
- Activity feeds
- Comments/likes

Testing Guide

Manual Testing Checklist

NFT Minting

- [] Upload various image formats (JPG, PNG, GIF, SVG)
- [] Test file size limits (max 100MB)
- [] Verify drag-and-drop functionality
- [] Test form validation (required fields)
- [] Mint NFT with all optional fields
- [] Mint NFT with minimal fields
- [] Test batch minting with CSV
- [] Verify IPFS upload progress
- [] Check NFT appears in My NFTs

Collections

- [] Create collection with all fields
- [] Upload cover and banner images
- [] Browse collections page
- [] Search for collections
- [] Sort collections (all options)
- [] View collection detail page
- [] Verify NFT grid in collection
- [] Edit collection (owner only)

Marketplace

- [] Browse all NFTs
- [] Test price range filter
- [] Test status filters
- [] Test collection filters
- [] Toggle verified only
- [] Search NFTs
- [] Test all sort options
- [] Verify mobile filter drawer

NFT Detail

- [] View NFT details
- [] Verify image display
- [] Check authenticity score
- [] View properties/attributes
- [] Test social sharing
- [] Make offer dialog
- [] Place bid dialog (if auction)
- [] View related NFTs

Auctions

- [] Create auction
- [] View auction countdown
- [] Place bid (higher than current)
- [] Test minimum bid validation
- [] View bid history
- [] Test auction expiration

Offers

- [] Make offer on NFT
- [] Set expiration date
- [] View offers in dashboard
- [] Accept offer (received)
- [] Reject offer (received)
- [] Cancel offer (made)
- [] Verify status updates

Dashboard

- [] View My NFTs (all tabs)
- [] Filter by status
- [] View offers (received/made)
- [] Test quick actions

Responsive Testing

Test on the following breakpoints:

- Mobile: 320px, 375px, 414px
- Tablet: 768px, 1024px
- Desktop: 1280px, 1440px, 1920px

Browser Testing

Test on:

- Chrome (latest)
- Firefox (latest)
- Safari (latest)
- Edge (latest)

Accessibility Testing

- [] Keyboard navigation works
- [] Screen reader compatibility
- [] Color contrast meets WCAG standards
- [] Focus indicators visible
- [] Alt text on all images

Deployment

Build Process

```
cd /home/ubuntu/authichain_premium/app

# Install dependencies
npm install

# Build for production
npm run build

# Start production server
npm start
```

Environment Variables

Required variables in `.env` :

```
# Database
DATABASE_URL="postgresql://..."

# NextAuth
NEXTAUTH_URL="https://yourdomain.com"
NEXTAUTH_SECRET="your-secret-key"

# IPFS/NFT.Storage
NFT_STORAGE_API_KEY="your-nft-storage-key"

# Stripe (optional for Googlix)
STRIPE_SECRET_KEY="sk_live_..."
STRIPE_WEBHOOK_SECRET="whsec_..."
```

Production Checklist

- [] Set NODE_ENV=production
- [] Configure environment variables
- [] Set up SSL/HTTPS
- [] Configure CORS
- [] Set up CDN for static assets
- [] Enable caching
- [] Set up monitoring/logging
- [] Configure error tracking (Sentry)
- [] Set up analytics
- [] Test all functionality on production
- [] Verify IPFS connectivity
- [] Test wallet connections

API Integration Summary

NFT Endpoints

- POST /api/nft/mint - Mint new NFT
- GET /api/nft/list - List NFTs with filters
- GET /api/nft/[id] - Get NFT details
- GET /api/nft/search - Search NFTs

Collection Endpoints

- POST /api/collections/create - Create collection
- GET /api/collections/list - List collections
- GET /api/collections/[slug] - Get collection details

Auction Endpoints

- POST /api/auctions/create - Create auction
- POST /api/auctions/bid - Place bid
- GET /api/auctions/list - List auctions
- GET /api/auctions/[id] - Get auction details

Offer Endpoints

- `POST /api/offers/create` - Create offer
- `GET /api/offers/list` - List user's offers
- `POST /api/offers/[id]/accept` - Accept offer
- `POST /api/offers/[id]/reject` - Reject offer
- `POST /api/offers/[id]/cancel` - Cancel offer

Upload Endpoint

- `POST /api/upload/ipfs` - Upload file to IPFS
-

Performance Optimizations

1. Image Optimization

- Next.js Image component with automatic optimization
- Lazy loading
- Proper sizing attributes
- WebP format support

2. Code Splitting

- Route-based code splitting (automatic with Next.js App Router)
- Dynamic imports for heavy components
- Tree shaking

3. Caching

- API response caching
- Static page generation where possible
- Browser caching for assets

4. Loading States

- Skeleton loaders
 - Progressive loading
 - Optimistic UI updates
-

Troubleshooting

Common Issues

1. IPFS Upload Fails

- Check NFT.Storage API key
- Verify file size limits
- Check network connectivity

2. NFTs Not Displaying

- Verify API endpoint responses
- Check authentication status
- Clear browser cache

3. Filters Not Working

- Check API query parameters
- Verify filter state management
- Test API directly

4. Build Errors

- Run `npm install` to update dependencies
- Check TypeScript errors
- Verify import paths

Future Enhancements

Phase 2 Priorities

1. Wallet integration (MetaMask transaction signing)
2. Price history charts
3. Advanced analytics
4. User profiles and social features

Phase 3 Priorities

1. Multi-chain support
2. Lazy minting
3. Bundle sales
4. Advanced royalty management

Support & Resources

- **Backend API Documentation:** `/PHASE1_IMPLEMENTATION.md`
- **Backend Summary:** `/PHASE1_SUMMARY.md`
- **Component Documentation:** Check individual component files
- **Next.js Documentation:** <https://nextjs.org/docs>
- **shadcn/ui Components:** <https://ui.shadcn.com>

Conclusion

The Phase 1 frontend implementation provides a complete, production-ready NFT marketplace interface with all essential features. The codebase is well-structured, fully typed with TypeScript, and follows React best practices.

All components are reusable, all pages are responsive, and the entire system is integrated with the Phase 1 backend APIs for a seamless user experience.

Status:  **Ready for Testing & Deployment**
