

AuthiChain Production Deployment - Quick Checklist

Pre-Deployment (Complete these BEFORE deploying)

Code & Build

- ☐ Run `npm run build` - confirms no errors
- ☐ All critical fixes verified:
- ☐ Subscription checkout opens Stripe (not redirecting to dashboard)
- ☐ `/product` route works (redirects to `/explore`)
- ☐ No cannabis terms visible (Sativa/Indica/Hybrid replaced)
- ☐ "Scan Strains" changed to "Verify Products"

Environment Variables Setup

- ☐ Copy `.env` file to production environment
- ☐ **Update these to PRODUCTION values:**
- ☐ `DATABASE_URL` - Production PostgreSQL connection
- ☐ `NEXTAUTH_URL` - Your production domain (e.g., `https://authichain.app`)
- ☐ `NEXTAUTH_SECRET` - Generate new secret (min 32 chars)
- ☐ `STRIPE_SECRET_KEY` - **Switch to `sk_live_...`**
- ☐ `NEXT_PUBLIC_STRIPE_PUBLISHABLE_KEY` - **Switch to `pk_live_...`**
- ☐ All 8 Stripe Price IDs - **Create in Live Mode first**
- ☐ `STRIPE_WEBHOOK_SECRET` - **From Live Mode webhook**
- ☐ `NFT_STORAGE_API_KEY` - Verify still valid
- ☐ `NEXT_PUBLIC_SITE_URL` - Your production URL

Database

- ☐ Production PostgreSQL database created
- ☐ Database accessible from deployment platform
- ☐ Run Prisma migrations: `npx prisma migrate deploy`
- ☐ Test connection: `npx prisma db pull`

Stripe Configuration (CRITICAL)

- ☐ **Switch Stripe Dashboard to LIVE MODE**
- ☐ Create all products and prices:
- ☐ Creator: \$29/month + \$278.4/year
- ☐ Pro: \$79/month + \$758.4/year
- ☐ Enterprise: \$299/month + \$2,870.4/year
- ☐ Agency: \$999/month + \$9,590.4/year
- ☐ Copy all 8 price IDs to environment variables
- ☐ Create webhook endpoint: `https://yourdomain.com/api/webhooks/stripe`
- ☐ Add webhook events:
- ☐ `checkout.session.completed`

- [] `customer.subscription.created`
- [] `customer.subscription.updated`
- [] `customer.subscription.deleted`
- [] `invoice.payment_succeeded`
- [] `invoice.payment_failed`
- [] Copy webhook secret to `STRIPE_WEBHOOK_SECRET`

Domain & SSL

- [] Custom domain registered
 - [] DNS configured (A/CNAME records)
 - [] SSL certificate ready (automatic with Vercel/Railway)
-

Deployment

Choose Your Platform:

Option 1: Vercel (Easiest)

```
cd /home/ubuntu/authichain_premium/app
vercel --prod
```

- Add environment variables in Vercel Dashboard
- Add custom domain in Settings
- Deploy with `vercel --prod`

Option 2: Railway

```
railway init
railway up
```

- Add environment variables via `railway variables set`
- Add custom domain in Railway Dashboard

Option 3: Custom VPS

```
npm install
npm run build
pm2 start npm --name authichain -- start
```

- Configure Nginx reverse proxy
 - Set up SSL with Let's Encrypt
-

Post-Deployment Testing

Critical Flow Tests (Do these manually)

1. Homepage

- [] Loads without errors
- [] No cannabis terms visible
- [] Images and styles load correctly

2. Pricing Page

- [] All 5 tiers display (Explorer, Creator, Pro, Enterprise, Agency)
- [] Categories show "Premium", "Standard", "Limited Edition"
- [] **CRITICAL:** Click "Get Started" on Creator tier
 - [] Should open Stripe Checkout (NOT redirect to dashboard)
 - [] Test with Stripe test card: 4242 4242 4242 4242
 - [] After payment, redirects to dashboard with success message

3. Navigation

- [] Click "Products" in header
 - [] Should redirect to /explore (not 404)
 - [] Browse marketplace
 - [] Categories show "Premium", "Standard", "Limited Edition"
 - [] NO "Sativa", "Indica", or "Hybrid" visible

4. Dashboard

- [] "Verify Products" card visible (not "Scan Strains")
- [] NFT gallery loads
- [] User profile loads

5. Wallet Authentication (if using MetaMask)

- [] Connect wallet works
- [] Sign message works
- [] Authentication succeeds

API Health Checks

```
# Test API endpoints
curl https://yourdomain.com/api/nft/list
curl https://yourdomain.com/api/collections/list
curl https://yourdomain.com/api/health
```

Stripe Webhook Test

- [] Go to Stripe Dashboard → Webhooks
 - [] Find your production webhook
 - [] Send test event
 - [] Verify "200 OK" response
 - [] Check application logs for webhook receipt
-

Monitoring Setup

Immediate (Do within 24 hours)

- [] Set up Uptime monitoring (UptimeRobot, Pingdom)
- [] Configure error tracking (Sentry)
- [] Set up email alerts for downtime

Within First Week

- [] Review application logs daily
 - [] Monitor Stripe dashboard for transactions
 - [] Check database performance
 - [] Monitor response times
-

Emergency Contacts & Rollback

If Something Breaks

Vercel:

```
vercel rollback [previous-deployment-url]
```

Railway:

- Go to Dashboard → Deployments → Redeploy previous version

Custom Server:

```
git checkout [previous-commit]
npm install && npm run build
pm2 restart authichain
```

Emergency Support

- Stripe Support: <https://support.stripe.com>
 - Vercel Support: support@vercel.com
 - Railway Support: <https://railway.app/help>
-

Success Criteria

Your deployment is successful when:

- ☒ All pages load without errors
- ☒ Stripe checkout opens correctly (not dashboard redirect)
- ☒ No cannabis terminology visible to users
- ☒ Database connected and queries working
- ☒ Webhooks receiving events from Stripe
- ☒ Users can sign up and authenticate
- ☒ NFT features functional (minting, browsing, etc.)

Congratulations!

Once all checkboxes are complete, AuthiChain is live in production!

Remember:

- Monitor the application closely for the first 48 hours
- Keep the Stripe Dashboard open to watch for transactions
- Review logs regularly for any errors
- Have the rollback procedure ready just in case

For detailed troubleshooting, see: `PRODUCTION_DEPLOYMENT_COMPLETE.md`
