

AuthiChain - Quick Deploy Guide

5-Minute Deployment to Vercel

Deploy Now (3 Commands)

```
# 1. Navigate to app directory
cd /home/ubuntu/authichain_premium/app

# 2. Login to Vercel (opens browser)
npx vercel login

# 3. Deploy to production
npx vercel --prod
```

That's it! Your app will be live at `https://authichain.vercel.app`

During Deployment

When prompted, answer:

```
? Set up and deploy "~/authichain_premium/app"? [Y/n] Y
? Which scope do you want to deploy to? [Your Account]
? Link to existing project? [y/N] N
? What's your project's name? authichain
? In which directory is your code located? ./
```

Vercel will:

1.  Upload your code
2.  Install dependencies
3.  Build your app
4.  Deploy to production
5.  Give you a live URL

After Deployment

Step 1: Add Environment Variables (5 minutes)

1. Go to: `https://vercel.com/dashboard`
2. Select your `authichain` project
3. Click **Settings** → **Environment Variables**
4. Copy all 34 variables from `/home/ubuntu/authichain_premium/app/.env`
5. For each variable:
 - Name: `DATABASE_URL`

- Value: [paste value from .env]
- Environments: ☒ Production ☒ Preview ☒ Development
- Click **Save**

Critical Variables to Add:

```

DATABASE_URL
NEXTAUTH_SECRET
NEXTAUTH_URL (update to your Vercel URL)
STRIPE_SECRET_KEY
NEXT_PUBLIC_STRIPE_PUBLISHABLE_KEY
STRIPE_WEBHOOK_SECRET
NFT_STORAGE_API_KEY
PRIVATE_KEY
CONTRACT_ADDRESS
POLYGON_AMOY_RPC_URL

```

Step 2: Update URLs (2 minutes)

After adding all variables, update these two:

```

NEXTAUTH_URL=https://your-app-name.vercel.app
NEXT_PUBLIC_SITE_URL=https://your-app-name.vercel.app

```

Step 3: Redeploy (1 minute)

```
npx vercel --prod
```

This applies your environment variables.

Step 4: Configure Stripe Webhooks (3 minutes)

1. Go to: <https://dashboard.stripe.com/webhooks>
 2. Click **Add endpoint**
 3. Endpoint URL: <https://your-app-name.vercel.app/api/webhooks/stripe>
 4. Select events:
 - `checkout.session.completed`
 - `customer.subscription.created`
 - `customer.subscription.updated`
 - `customer.subscription.deleted`
 - `invoice.payment_succeeded`
 - `invoice.payment_failed`
 5. Click **Add endpoint**
 6. Copy the **Signing secret**
 7. Update `STRIPE_WEBHOOK_SECRET` in Vercel
 8. Redeploy: `npx vercel --prod`
-

Test Your Deployment

Visit your live URL and test:

1. **Homepage** - Should load instantly
 2. **Sign Up** - Create a test account
 3. **Wallet Connect** - Connect MetaMask
 4. **Mint NFT** - Try minting a test NFT
 5. **Marketplace** - Browse NFTs
 6. **Pricing** - View subscription plans
 7. **Dashboard** - Access user dashboard
-

Total Time: ~15 Minutes

- Deploy: 3 min
 - Add env vars: 5 min
 - Update URLs: 2 min
 - Stripe webhooks: 3 min
 - Testing: 2 min
-

Troubleshooting

“No credentials found”

```
npx vercel login
```

“Build failed”

Check build logs in Vercel dashboard

“Environment variable not found”

Make sure all 34 variables are added in Vercel

“Stripe webhook not working”

1. Check webhook URL is correct
 2. Verify signing secret matches
 3. Check webhook events are selected
-

Full Documentation

For detailed guides, see:

- `/home/ubuntu/authichain_premium/DEPLOYMENT_EXECUTION_REPORT.md`
- `/home/ubuntu/authichain_premium/DEPLOYMENT_VERCEL.md`
- `/home/ubuntu/authichain_premium/PRODUCTION_DEPLOYMENT_GUIDE.md`

You're Done!

Your AuthiChain app is now live and ready for users!

Next Steps:

- Share your URL with users
 - Monitor analytics in Vercel dashboard
 - Set up custom domain (optional)
 - Enable Vercel Analytics (optional)
-
