

Stripe Setup Guide for AuthiChain

Overview

This guide walks you through setting up Stripe payment processing for the AuthiChain platform, including creating products for all 5 subscription tiers (Explorer, Creator, Pro, Enterprise, Agency).

Prerequisites

1. **Stripe Account:** Create a free account at stripe.com (<https://stripe.com>)
2. **API Keys:** Get your test and live API keys from the Stripe Dashboard

Quick Start (Automated Setup)

Option 1: Use the Automation Script

We've created an automated script that sets up all products and prices for you:

```
cd /home/ubuntu/authichain_premium/app

# Make sure your .env file has STRIPE_SECRET_KEY set
npm run tsx scripts/setup-stripe-products.ts
```

This script will:

- Create 5 products in Stripe (one for each tier)
- Create monthly and annual pricing for paid tiers
- Generate environment variable configuration
- Save all product IDs to `stripe-products.json`
- Create `stripe-config.env` with all the variables

After running the script, copy the generated environment variables to your `.env` file.

Manual Setup (Alternative)

If you prefer to set up products manually or need to customize the configuration:

Step 1: Get Your Stripe API Keys

1. Go to [Stripe Dashboard](https://dashboard.stripe.com) (<https://dashboard.stripe.com>)
2. Click **Developers** → **API keys**
3. Copy your **Publishable key** (starts with `pk_test_`)
4. Click **Reveal test key** and copy your **Secret key** (starts with `sk_test_`)

Add these to your `.env` file:

```
STRIPE_SECRET_KEY="sk_test_your_secret_key_here"
NEXT_PUBLIC_STRIPE_PUBLISHABLE_KEY="pk_test_your_publishable_key_here"
```

Step 2: Create Products in Stripe

Go to **Products** → **Add product** and create the following 5 products:

1. Explorer (Free Tier)

- **Name:** AuthiChain Explorer
- **Description:** Perfect for NFT curious browsers - Free forever
- **Pricing:** One-time or recurring → **Recurring**
- **Price:** \$0.00 USD / month
- **Features** (add in metadata):
 - Browse unlimited NFTs
 - Basic authentication verification
 - 5 free authenticity checks/month
 - Community forum access

Note: For free tier, you might want to just skip price creation and handle this tier specially in your code.

2. Creator

- **Name:** AuthiChain Creator
- **Description:** Launch your NFT career with essential tools
- **Pricing:** Create 2 prices for this product:
- **Monthly:** \$29.00 USD / month
- **Annual:** \$290.00 USD / year (Save \$58 - 2 months free)
- **Features:**
 - Mint up to 50 NFTs/month
 - Advanced authentication tools
 - 50 authenticity verifications/month
 - Custom storefront page
 - 5% platform fee on sales

Copy the price IDs:

```
STRIPE_CREATOR_MONTHLY_PRICE_ID="price_xxxxx"
STRIPE_CREATOR_ANNUAL_PRICE_ID="price_xxxxx"
```

3. Pro

- **Name:** AuthiChain Pro
- **Description:** Scale your NFT business with advanced features
- **Pricing:**
- **Monthly:** \$79.00 USD / month
- **Annual:** \$790.00 USD / year (Save \$158 - 2 months free)
- **Features:**
 - Mint up to 250 NFTs/month
 - Unlimited authenticity verifications
 - Advanced analytics & insights
 - API access (basic)
 - 3% platform fee on sales

Copy the price IDs:

```
STRIPE_PRO_MONTHLY_PRICE_ID="price_XXXXX"  
STRIPE_PRO_ANNUAL_PRICE_ID="price_XXXXX"
```

4. Enterprise

- **Name:** AuthiChain Enterprise
- **Description:** For major brands & large collections
- **Pricing:**
- **Monthly:** \$299.00 USD / month
- **Annual:** \$2,990.00 USD / year (Save \$598 - 2 months free)
- **Features:**
- Unlimited NFT minting
- Dedicated account manager
- White-label platform instance
- Full API access with webhooks
- 1.5% platform fee on sales

Copy the price IDs:

```
STRIPE_ENTERPRISE_MONTHLY_PRICE_ID="price_XXXXX"  
STRIPE_ENTERPRISE_ANNUAL_PRICE_ID="price_XXXXX"
```

5. Agency

- **Name:** AuthiChain Agency
- **Description:** For marketing agencies & resellers
- **Pricing:**
- **Monthly:** \$999.00 USD / month
- **Annual:** \$9,990.00 USD / year (Save \$1,998 - 2 months free)
- **Features:**
- Manage up to 25 client accounts
- Full white-label rights
- Agency dashboard & reporting
- 0% platform fee on client sales
- Revenue sharing program

Copy the price IDs:

```
STRIPE_AGENCY_MONTHLY_PRICE_ID="price_XXXXX"  
STRIPE_AGENCY_ANNUAL_PRICE_ID="price_XXXXX"
```

Step 3: Set Up Webhooks

Webhooks allow Stripe to notify your application about payment events.

1. Go to **Developers → Webhooks**
2. Click **Add endpoint**

3. Set the endpoint URL:

- Development: `http://localhost:3000/api/webhooks/stripe`
- Production: `https://yourdomain.com/api/webhooks/stripe`

4. Select events to listen to:

- `checkout.session.completed`
- `customer.subscription.created`
- `customer.subscription.updated`
- `customer.subscription.deleted`
- `invoice.payment_succeeded`
- `invoice.payment_failed`

5. Click **Add endpoint**6. Copy the **Signing secret** (starts with `whsec_`)

Add to your `.env` file:

```
STRIPE_WEBHOOK_SECRET="whsec_your_webhook_secret_here"
```

Complete Environment Variables

After setup, your `.env` file should contain all of these variables:

```
# Database
DATABASE_URL="your_postgresql_connection_string"

# NextAuth
NEXTAUTH_SECRET="your_nextauth_secret"
NEXTAUTH_URL="http://localhost:3000"

# Stripe API Keys
STRIPE_SECRET_KEY="sk_test_your_secret_key"
NEXT_PUBLIC_STRIPE_PUBLISHABLE_KEY="pk_test_your_publishable_key"
STRIPE_WEBHOOK_SECRET="whsec_your_webhook_secret"

# Creator Tier
STRIPE_CREATOR_MONTHLY_PRICE_ID="price_xxxxx"
STRIPE_CREATOR_ANNUAL_PRICE_ID="price_xxxxx"

# Pro Tier
STRIPE_PRO_MONTHLY_PRICE_ID="price_xxxxx"
STRIPE_PRO_ANNUAL_PRICE_ID="price_xxxxx"

# Enterprise Tier
STRIPE_ENTERPRISE_MONTHLY_PRICE_ID="price_xxxxx"
STRIPE_ENTERPRISE_ANNUAL_PRICE_ID="price_xxxxx"

# Agency Tier
STRIPE_AGENCY_MONTHLY_PRICE_ID="price_xxxxx"
STRIPE_AGENCY_ANNUAL_PRICE_ID="price_xxxxx"

# Optional: Product IDs for reference
STRIPE_CREATOR_PRODUCT_ID="prod_xxxxx"
STRIPE_PRO_PRODUCT_ID="prod_xxxxx"
STRIPE_ENTERPRISE_PRODUCT_ID="prod_xxxxx"
STRIPE_AGENCY_PRODUCT_ID="prod_xxxxx"
```

Testing Subscriptions

Use these test card numbers in Stripe test mode:

Scenario	Card Number	CVV	Expiry
Success	4242 4242 4242 4242	Any 3 digits	Any future date
Decline	4000 0000 0000 0002	Any 3 digits	Any future date
3D Secure	4000 0025 0000 3155	Any 3 digits	Any future date
Insufficient Funds	4000 0000 0000 9995	Any 3 digits	Any future date

Testing the Subscription Flow

1. Start your development server:

```
bash
cd /home/ubuntu/authichain_premium/app
npm run dev
```

2. Navigate to the pricing page: `http://localhost:3000/pricing`

3. Click “Subscribe” on any tier

4. Use a test card number to complete checkout

5. Verify the subscription appears in:
 - Stripe Dashboard → Customers
 - Your database (check the `Subscription` table)
 - User dashboard at `/dashboard/subscription`

Switching to Live Mode

When ready for production:

1. Get your **Live API keys** from Stripe Dashboard
 2. Update your production `.env` file with live keys
 3. Create the same products in **Live mode** (or run the script again with live keys)
 4. Update webhook endpoint to use your production URL
 5. **Important:** Keep test keys for development environment
-

Troubleshooting

“Invalid API Key”

- Make sure you’re using the correct key format (starts with `sk_test_` or `sk_live_`)
- Check that the key is not expired
- Ensure no extra spaces or quotes in the `.env` file

“Price not found”

- Verify the price ID starts with `price_`
- Check you’re using the correct mode (test vs live)
- Ensure the price is active in Stripe Dashboard

Webhook not receiving events

- Check your endpoint URL is correct and accessible
- Verify webhook secret is correct
- Check server logs for incoming requests
- Use Stripe CLI for local testing: `stripe listen --forward-to localhost:3000/api/webhooks/stripe`

Subscription not showing in database

- Check database connection
- Verify Prisma schema is up to date (`npx prisma generate`)
- Check API route logs for errors
- Ensure webhook is properly configured

Support

If you encounter issues:

1. Check the [Stripe Dashboard](https://dashboard.stripe.com) (https://dashboard.stripe.com) for error messages
2. Review server logs for detailed error information
3. Test with Stripe CLI for webhook debugging
4. Consult the Stripe API reference for specific endpoints
