

AuthiChain - Vercel Quick Start

Deploy in 5 Minutes

Option 1: Using Deployment Script (Easiest)

```
cd /home/ubuntu/authichain_premium/app
./deploy-vercel.sh
```

Option 2: Manual CLI Deployment

```
# 1. Install Vercel CLI
npm install -g vercel

# 2. Login
vercel login

# 3. Deploy
cd /home/ubuntu/authichain_premium/app
vercel --prod
```

Option 3: Vercel Dashboard

1. Go to <https://vercel.com/new>
2. Upload `/home/ubuntu/authichain_premium/app` folder
3. Add environment variables
4. Click "Deploy"

Critical Environment Variables (Must Add Before Deploy)

Essential (10 variables)

DATABASE_URL	# PostgreSQL connection string
NEXTAUTH_SECRET	# Auth secret (generate new)
NEXTAUTH_URL	# https://your-app.vercel.app
STRIPE_SECRET_KEY	# Stripe secret key
NEXT_PUBLIC_STRIPE_PUBLISHABLE_KEY	# Stripe public key
STRIPE_WEBHOOK_SECRET	# Stripe webhook secret
NFT_STORAGE_API_KEY	# NFT.Storage API key
PRIVATE_KEY	# Blockchain wallet private key
POLYGON_AMOY_RPC_URL	# Polygon RPC URL
CONTRACT_ADDRESS	# Smart contract address

Complete List

See **VERCEL_ENV_MIGRATION_GUIDE.md** for all 34 variables with values and instructions.

✓ Pre-Deployment Checklist

- ☐ Vercel account created
- ☐ All 34 environment variables ready
- ☐ Stripe Live keys obtained (or use Test keys initially)
- ☐ Database accessible from internet
- ☐ Production build tested locally

🎯 Post-Deployment Steps

After your first deployment:

1. Note Your URL

Example: `https://authichain-abc123.vercel.app`

2. Update URL Variables

- Go to Vercel Dashboard → Settings → Environment Variables
- Update `NEXTAUTH_URL` with deployment URL
- Update `NEXT_PUBLIC_SITE_URL` with deployment URL
- Redeploy: `vercel --prod --force`

3. Configure Stripe Webhooks

- Stripe Dashboard → Developers → Webhooks
- Add endpoint: `https://your-app.vercel.app/api/webhooks/stripe`
- Copy webhook secret
- Update `STRIPE_WEBHOOK_SECRET` in Vercel
- Redeploy

4. Test Everything

- ☐ Homepage loads
- ☐ Authentication works
- ☐ Payments work (test mode)
- ☐ NFT minting works
- ☐ Wallet connection works

📖 Full Documentation

Document	Purpose
DEPLOYMENT_READY.md	Current status and overview
VERCEL_ENV_MIGRATION_GUIDE.md	Complete environment variables reference
VERCEL_DEPLOYMENT_GUIDE.md	Detailed step-by-step deployment
deploy-vercel.sh	Automated deployment script

Common Issues

“Missing environment variable”

Fix: Add all 34 variables to Vercel before deploying

“Database connection failed”

Fix: Ensure DATABASE_URL is correct and database allows external connections

“Build failed”

Fix: Run `npm run build` locally to identify issues

Stripe webhooks not working

Fix: Ensure webhook URL matches deployment URL and secret is correct

Need Help?

- **Full Guide:** See `VERCEL_DEPLOYMENT_GUIDE.md`
 - **Environment Setup:** See `VERCEL_ENV_MIGRATION_GUIDE.md`
 - **Vercel Docs:** <https://vercel.com/docs>
 - **Vercel Support:** <https://vercel.com/support>
-

Estimated Time

- **First deployment:** 15-30 minutes
 - **Post-deployment config:** 10-15 minutes
 - **Total:** ~30-45 minutes
-

Ready? Run: `./deploy-vercel.sh`

Good luck! 🚀
